```
The invention relates to isolated human kinase proteins and nucleic acid and peptide sequences can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The nucleic acids are useful as probes or primers, in constructing recombinant vectors, for expressing antigenic portions of the proteins, chromosome mapping, drug screening, testing an individual for a genotype, and for gene therapy in patients containing cells that are aberrant in kinase gene expression. The proteins may be used in drug screening assays, in the identification of compounds that modulate, stimulate or inhibit kinase activity, in pharmacogenomic modulate, in treating disorders characterised by an absence or unwanted expression of the protein (bone osteosarcoma, or colon-moderately differentiated adenocarcinoma), and in generating antibodies specific for the peptides. Such antibodies can be used to detect the protein in situ, in vitro, or in cell lysate or supernatant, to isolate and purify the proteins from host cells, pharmacogenomic analysis, tissue typing, and in thibiting protein function. The present sequence is human kinase protein gene is located on chromosome 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human kinase proteins and nucleic acids, useful in drug screening assays, identifying modulators of kinase activity or treating disorders characterized by absence or unwanted expression of the protein.

The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an antigen. The nucleic acid is useful for diagnosing a disease or susceptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STATE activation. A transformant expressing the protein is useful for producing a pharmaceutical composition. Compositions, antibodies and antisense molecules are useful for the treating a disease associated with STATE activation such as allergic diseases, inflammation, autoimmune diseases, diabetes, allerting disease associated with STATE activation and/or prevention of Thi hyperactive diseases. Compositions are also useful in rheumatoid attribing of observativity. The protein has efficient promoting STATE activation or inhibition of STATE. The present sequence represents the activation or inhibition of STATE. The promotein which promotes STATE activation. l transducer and activator of transcription 6 activation purified protein, for diagnosing and treating disease d with activation/inhibition of transcription factor e.g. Claim 1; SEQ ID NO 108; 1368pp; English. diabetes and cancer. signal associated promoting

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the cells not expression of the gene comprises providing a change in an expression of the gene relative to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent comprises an antisense oligonucleotide. The subject comprises an ammal, preferably a human. The method also comprises providing a polypeptide and an agent, exposing the polypeptide to the agent, detecting binding of the agent to the agent and identifying fat cell number or size in the subject. The agent comprises an antibody. A method of regulating fat cell number or size comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the subject is altered. The method is useful for identifying compounds that influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents a human polypeptide used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the

The invention relates to a novel isolated nucleic acid and the PRO polypeptide encoded by it. A protein of the invention has antiinflammatory, antiarthritic, antiinflammatory, antiarthritic, antiinflammatory, antiarthritic, antiporatic, immunosuppressive, osteopathic, antidiabetic, dermatological, antiporiatic, antialergic, antiasthmatic, hepatotropic, and respiratory activity. A polymucleotide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic lupus exythematosus, theumatoid arthritis, osteoarthritis, juvenile chronic arthritis, a spondylaarthropathy, systemic sclerosis, an idiopathic inflammatory myopathy, Sjogren's syndrome, systemic

Compositions are useful for treating disease associated with STATE activation and/or prevention of Thi hyperactive diseases. Compositions are also useful in rheumatoid arthritis, osteoarthritis, systemic lupus erythematosus, sepsis, asthma, allergic rhinitis, ischaemic heart diseases, subarachnoid haemorrhage, viral hepatitis and AIDS. The protein has efficient promoting STATE activity. The protein or nucleic acid is effectively useful for screening compounds for treating and preventing disease associated with excessive

The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an antigen. The mucleic acid is useful for diagnosting a disease or susceptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STAT6 activation. A transformant expressing the protein is useful for screening composition. Compositions, antibodies and antisense molecules are useful for the treating a disease associated with STAT6 activation such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              92
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   compounds for treating and preventing disease associated with excessive activation or inhibition of STAT6. The present sequence represents the amino acid sequence of a human protein which promotes STAT6 activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ---PSHYLEARSLNERDYRDRRYVDEYRNDYCEGYVPRHYHRD

ADI26141;

number or size in the subject. The agent comprises an antisense oligonuclectide. The subject comprises a mammal, preferably a human. The method also comprises providing a polypeptide and an agent, exposing the polypeptide to the agent, detecting binding of the agent to the polypeptide or a change in an activity of the polypeptide, treating a subject with the agent comprises an antibody. A method of regulating fat cell number or size comprises an antibody. A method of regulating fat cell number or size comprises providing a subject containing fat cells and an antibody. A method of regulating fat cell number or size comprises providing a subject containing the subject with the agent under conditions so that fat cell size or number in the subject is altered. The method is useful for identifying compounds that treating or preventing obsesty or size, for preparing a composition for treating or preventing obsesty or diabetes. This sequence represents a mouse polypeptide used in the scope of the invention.

Sequence 481 AA;

```
Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene relative to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent and identifying fat cell

```
The present sequence is a novel protein kinase. The novel protein kinases and the nucleic acids that encode them may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies ant agonists may also be used to down regulate kinase expression and activity. Diseases related to kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune disorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopachies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory bowel disease, chronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This polypeptide comprises novel mouse CLK serine/threonine kinase mCLK4, from the CLK serine/threonine kinase family of proteins that regulate RNA splicing in cells. mCLK4 cDNA was cloned from a mouse embryo 11.5 p.c.
1ZAP CDNA library. The invention discloses the discovery of novel protein kinases mCLK2 (see AAW49912), mCLK3 and mCLK4 (see AAW49914) of mol.wt.
89.9, 58.5 and 57.2 kDa, respectively, as well as other novel proteins (see AAW49906-10) involved in cellular signal transduction, and provides vectors, host cells, purified recombinant proteins, methods for identifying compounds that activate or inhibit the novel proteins, as well as methods for the diagnosis and treatment of diseases associated with the novel proteins. Oversexpression of CLK serine/threonine kinases has been implicated in certain types of cancer. Compounds that inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                236
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       296
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            57 IESGYRIHCSKSSVRSRRSSPKRKRNRHCSSHQSRSKSHRRKRSKSIEDDEEGHLICQSG 116

base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAP/microtubule affinity-regulating kinase 3), that specifically hybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disorder, particularly cancer and neurodegenerative diseases e.g. Alzheimer's disease. The present sequence is a MARK3 associated protein included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   140

The invention provides human protein kinase molecules (HPKM) (AAY27052-57) and nucleic acid sequences (AAX89850-55) encoding the HPKM polypeptides respectively. The HPKM polypeptides can be produced recombinantly by standard recombinant methodology. Protein kinases add phosphate groups to proteins. HPKM polypeptide or an HPKM antagonist is
                                                                                                                                                                                                                                                                    /note= "potential signature sequence for protein kinase catalytic domain"
                                                                                                                                                                                                                                                                                                                                                     /note= "potential signature sequence for protein kinase
catalytic domain"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human protein kinase molecules useful for treating or preventing cancer or an immune disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Corley NC;

or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the

Claim 14; SEQ ID NO 353; 275pp; English.

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent detecting a change in expression of the gene relative to expression of the gene in an expression vector not exposed to the agent, treating a subject. The agent comprises an antisense relative to expression of the subject. The agent comprises an antisense oligonucleotide. The subject with the agent comprises an antisense oligonucleotide to the agent, detecting binding of the agent to the agent, exposing the polypeptide to the agent, detecting binding of the agent to the agent comprises an antibody. A method of regulating fat cell subject with the agent comprises an antibody. A method of regulating fat cell number or size comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the subject is altered. The method is useful for identifying compounds that influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents a human polypeptide used in the scope of the invention.

New protein complexes comprising protein-protein interactions (e.g. MAPKAP-K3/AP-3 delta or C-NAP-1/Clathrin HC), useful for diagnosing physiological generative disorders or screening drugs for these diseases. 

Example 9; Page; 60pp; English

The invention describes an isolated protein complex, comprising two proteins. The protein complex comprises: protein kinase MAPRAP-K3 and APD-CC 3 adaptor complex delta sub-unit; MAPKAP-K3 and amyloid A4 precursor. Protein, APP-695; MAPKAP-K3 and heat shock protein kinase ERK3 and call cycle dependent kinase (CDK) 9 (IAAN0934 (unknown function); ERK3 and cell cycle dependent kinase (CDK) 9; ERK3 and protein kinase (CDK) 9; ERK3 and interactions. The protein complexes are useful for diagnosing physiological generative disorders, drug screening for agents that modulate the interaction of the proteins (thus identify drug targets), and identifying additional proteins in the pathway common to the proteins. These physiological disorders include non-insulin dependent disabetes mellitus (NIDDM), neurodegenerative disorders (e.g. rheumatory bowel disorder) and other human disease such as atherosclerosis, cardiac hypertrophy and hypoxic brain injury. This sequence represents the serine and threenine kinase Clk, residues 1-364 of which binds to the bait protein ERK3, a mitogen activated protein kinase (AAU75105) in a yeast two-hybrid assay for determining components of signal transduction pathways and forms an interaction claimed in claime continuation. Note: This sequence does not appear in the components of the invention. Note: This sequence does not appear in the components of such as a pecification but has been obtained from a reference given in the

CDC-like kinase 1. The antisense oligonucleotides of the invention are useful for modulating the expression of CDC-like kinase 1, and for treating diseases or conditions associated with expression of CDC-like kinase 1 (e.g. cancers and autoimmune disorders). The antisense oligonucleotides may also be used to prevent or delay infection, inflammation and tumour formation. The present amino acid sequence represents a human CDC-like kinase 1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HGHICIVFELLGESTYDFIKENGFLPFRLDHIRKMAYOICKSVNFLHSNKLTHTDLKPEN

```

HIV propagation; human.

```
This invention relates to the novel association of protein sequences (and the genes which encode them) to the NF-kappaB pathway. The invention may be useful for the production of compounds with an anticinilammatory, cycostatic, hepatotropic, virucide, antiarthritic, anticinilammatory, cycostatic, hepatotropic, virucide, antiarteriosclerotic, anticinilammatory, cycostatic, nepatotropic, virucide, antiarteriosclerotic, manipuscupressive or immunodulator, cerebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immune disorder; an inflammatory disorder, an inflammatory disorder, an inflammatory disorder, an inflammatory disorder, and inflammatory disorders, hoggkin's lymphomas, N=minked anhidrotic crodermal dysplasia, X-linked anhidrotic crodermal dysplasia, immunodeficiency, viral infections, HV-1, HTLV-1, crodermal dysplasia, immunodeficiency, viral infections, HV-1, HTLV-1, crodermal dysplasia, immunodeficiency, viral infections, enthyroid sick survival; evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick organ transplant rejection, conditions related to oberrant adult transplant rejection, conditions related to oberrant signal transplant croderion, conditions related to oberrant signal transplant croderion, conditions percent sequence is that of a human protein which the rivinses. The present sequence is that of a human protein with the NP-kappaB pathway of the invention. Note: This sequence does not appear in the provel sesociation with the NP-kappaB pathway of the rovel sesoc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                   Carman J;

```

USES

AND

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description
